

# City of Royal Oak Retirement System

76<sup>th</sup> Actuarial Valuation Report  
as of June 30, 2024

November 20, 2024

Board of Trustees  
City of Royal Oak Retirement System  
Royal Oak, Michigan

**Re: City of Royal Oak Retirement System Actuarial Valuation as of June 30, 2024  
Actuarial Disclosures**

Dear Board Members:

The results of the June 30, 2024 Annual Actuarial Valuation of the City of Royal Oak Retirement System are presented in this report.

This report was prepared at the request of the Board and is intended for use by the Retirement System and those designated or approved by the Board. This report may be provided to parties other than the System only in its entirety and only with the permission of the Board. GRS is not responsible for unauthorized use of this report.

The purposes of the valuation are to measure the System's funding progress, and to determine the employer contribution rate for the fiscal year ending June 30, 2026. This report should not be relied on for any purpose other than the purposes described herein. Determinations of financial results, associated with the benefits described in this report, for purposes other than those identified above may be significantly different.

The contribution rate in this report is determined using the actuarial assumptions and methods disclosed in Section C of this report. This report includes risk metrics on page D-2 and in the Appendix, but does not include a more robust assessment of the risks of future experience not meeting the actuarial assumptions. Additional assessment of risks was outside the scope of this assignment.

This valuation assumed the continuing ability of the plan sponsor to make the contributions necessary to fund this plan. A determination regarding whether or not the plan sponsor is actually able to do so is outside our scope of expertise and was not performed.

The findings in this report are based on data and other information through June 30, 2024. The valuation was based upon information furnished by the City, concerning Retirement System benefits, financial transactions, plan provisions and active members, terminated members, retirees and beneficiaries. We checked for internal reasonability and year-to-year consistency, but did not audit the data. We are not responsible for the accuracy or completeness of the information provided by the City.

This report was prepared using assumptions adopted by the Board. The combined effect of the assumptions, excluding prescribed assumptions or methods set by law, is expected to have no significant bias (i.e., not significantly optimistic or pessimistic). All actuarial assumptions used in this report are reasonable for the purposes of this valuation. Additional information about the actuarial assumptions is included in the section of this report entitled Summary of Valuation Methods and Assumptions.

This report was prepared using our proprietary valuation model and related software which, in our professional judgment, has the capability to provide results that are consistent with the purposes of the valuation and has no material limitations or known weaknesses. We performed tests to ensure that the model reasonably represents that which is intended to be modeled.

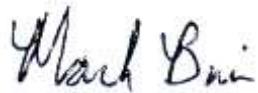

This report has been prepared by actuaries who have substantial experience valuing public employee retirement systems. To the best of our knowledge, the information contained in this report is accurate and fairly presents the actuarial position of the City of Royal Oak Retirement System as of the valuation date. All calculations have been made in conformity with generally accepted actuarial principles and practices, and with the Actuarial Standards of Practice issued by the Actuarial Standards Board.

Mark Buis and Michael D. Kosciuk are Members of the American Academy of Actuaries (MAAA) and meet the Academy's Qualification Standards to render the actuarial opinions contained herein.

The signing actuaries are independent of the plan sponsor.

Gabriel, Roeder, Smith & Company will be pleased to review this valuation and report with the Board of Trustees and to answer any questions pertaining to the valuation.

Respectfully submitted,  
Gabriel, Roeder, Smith & Company

Mark Buis, FSA, EA, FCA, MAAA

Michael D. Kosciuk, FSA, EA, FCA, MAAA

## **SECTION A**

---

### **VALUATION RESULTS**

## Funding Objective

The funding objective of the Retirement System is to establish and receive contributions, expressed as percents of active member payroll, which will accumulate assets during members' periods of employment that will be sufficient to finance benefits throughout their retirement years.

## Contribution Rates

The Retirement System is supported by member contributions, City contributions and investment income from Retirement System assets.

Contributions which satisfy the funding objective are determined by the annual actuarial valuation and are sufficient to:

- Cover the actuarial present value of benefits allocated to the current year by the actuarial cost method described in Section C (the normal cost); and
- Finance over a reasonable period of future years the actuarial present value of benefits not covered by valuation assets and anticipated future normal costs (the unfunded actuarial accrued liability).

***Computed contribution rates*** for the fiscal year ending June 30, 2026 are shown on page A-2.

## Contributions to Provide Benefits Fiscal Year Ending June 30, 2026

Total Contribution for	Computed Contributions Expressed as Percents of Active Member Payroll & Dollars		
	General & Water	Police Officers*** & Fire Fighters	Total **
<b>Normal Cost</b>			
Age and Service Benefits	12.72 %	19.82 %	18.65 %
Disability	0.78 %	2.49 %	2.21 %
Death	0.28 %	0.19 %	0.20 %
Deferred Service Pensions	1.45 %	0.60 %	0.74 %
Future Refunds of Member Contributions	0.26 %	0.35 %	0.34 %
<b>Totals</b>	<b>15.49 %</b>	<b>23.45 %</b>	<b>22.14 %</b>
<b>Member Contributions</b>	<b>5.36 %</b>	<b>5.89 %</b>	<b>5.81 %</b>
<b>Employer Normal Cost</b>	<b>10.13 %</b>	<b>17.56 %</b>	<b>16.33 %</b>
<b>Unfunded Actuarial Accrued Liability*</b>	<b>\$ 846,272</b>	<b>52.55 %</b>	
<b>Computed Employer Rate</b>		<b>70.11%</b>	
<b>Projected Payroll</b>	<b>\$2,577,252</b>	<b>\$15,070,736</b>	
<b>Employer \$ Amount (Based on Projected Payroll)</b>	<b>\$1,107,348</b>	<b>\$10,566,093</b>	<b>\$11,673,441</b>

\* Amortized as a level dollar amount over 14 years for the General and Water group and level percent-of-payroll over 19 years for the Police Officers and Fire Fighters.

\*\* Normal cost based on a weighted average of rates from each group.

\*\*\* Includes Police Service Aides.

### Determining Employer Dollar Contributions

For any period of time, the percent-of-payroll contribution rate should be converted to dollars – and then contributed to the Retirement System.

**Recommended Procedure:** (1) at the end of each payroll period, multiply the active member payroll for the period by the employer contribution percent; and (2) promptly contribute the dollar amount so determined.

Applying the employer normal cost percentage to the General and Water member projected payroll and adding the contribution for unfunded actuarial accrued liability produces annual employer contributions of \$1,107,348 for the General and Water group. Applying the employer contribution rate of 70.11% to the Police and Fire member projected payroll produces annual employer contributions of \$10,566,093 for the Police and Fire group.

## Present Value of Future Benefits and Accrued Liability

	June 30, 2024		
	General	Police/Fire	Total
A. Accrued Liability			
1. For retirees and beneficiaries	\$ 66,261,077	\$ 138,412,893	\$ 204,673,970
2. For vested terminated members	1,283,324	894,074	2,177,398
3. For present active members			
a. Value of expected future benefit payments	21,712,092	85,524,727	107,236,819
b. Value of future normal costs	2,562,685	33,220,735	35,783,420
c. Active member accrued liability: (a) - (b)	<u>19,149,407</u>	<u>52,303,992</u>	<u>71,453,399</u>
4. Total accrued liability	86,693,808	191,610,959	278,304,767
B. Present Assets (Funding Value)	<u>79,141,182</u>	<u>84,456,848</u>	<u>163,598,030</u>
C. Unfunded Accrued Liability: (A.4) - (B)	<u>7,552,626</u>	<u>107,154,111</u>	<u>114,706,737</u>
D. Funding Ratio: (B) / (A.4)	<u>91.3%</u>	<u>44.1%</u>	<u>58.8%</u>
E. Funding Ratio: Market Value Basis	<u>90.2%</u>	<u>43.7%</u>	<u>58.2%</u>

## Derivation of Experience Gain (Loss)

### Year Ended June 30, 2024

Actual experience will never (except by coincidence) coincide exactly with assumed experience. Gains and losses often cancel each other over a period of years, but sizable year-to-year fluctuations are common. Detail on the derivation of this years' experience gain (loss) is shown below:

<u>All Groups Combined</u>	
<u>(Amounts in Thousands)</u>	
(1) UAAL* at start of year	\$ 101,103
(2) Normal cost from last valuation	3,131
(3) Actual member and employer contributions	10,174
(4) Interest accrual	7,075
(5) Expected UAAL before changes	101,135
(6) Change in benefit provisions	34
(7) Change from assumption revision	8,869
(8) Expected UAAL after changes	110,037
(9) Actual UAAL	114,707
(10) Total Gain (Loss): (8) - (9)	(4,670)
As a percent of AAL <sup>^</sup> at the start of the year	(1.8)%
(11) Investment Gain (Loss)	1,465
As a percent of AAL at the start of the year	0.6%
(12) Liability Gain (Loss): (8) - (9) - (11)	(6,135)
As a percent of AAL at the start of the year	(2.4)%
(13) Actuarial Accrued Liabilities at start of year	262,917

\* *Unfunded Actuarial Accrued Liability.*

<sup>^</sup> *Actuarial Accrued Liability.*

Valuation Date	Asset Experience Gain (Loss) as % of Beginning of Year Accrued Liability	Liability Experience Gain (Loss) as % of Beginning of Year Accrued Liability	Total Experience Gain (Loss) as % of Beginning of Year Accrued Liability
6/30/2015	(0.1)%	(1.0)%	(1.1)%
6/30/2016	(0.4)%	(1.7)%	(2.1)%
6/30/2017	(0.1)%	(1.0)%	(1.1)%
6/30/2018	(1.6)%	(0.3)%	(1.9)%
6/30/2019	(1.1)%	(0.5)%	(1.6)%
6/30/2020	(0.4)%	(1.3)%	(1.7)%
6/30/2021	2.2 %	(1.0)%	1.2 %
6/30/2022	(1.1)%	(1.1)%	(2.2)%

6/30/2024	0.6 %	(2.4)%	(1.8)%

## Development of Funding Value of Retirement System Assets

Year Ended June 30:	2023	2024	2025	2026	2027	2028
A. Funding Value Beginning of Year	\$162,681,134	\$161,814,117				
B. Market Value End of Year	154,693,172	161,883,130				
C. Market Value Beginning of Year	151,680,634	154,693,172				
D. Non-Investment Net Cash Flow	(10,734,277)	(11,013,379)				
E. Investment Income						
E1. Market Total: B-C-D	13,746,815	18,203,337				
E2. Amount for Immediate Recognition: (7.25)%	11,405,265	11,332,288				
E3. Amount for Phased-In Recognition: E1-E2	2,341,550	6,871,049				
F. Phased-In Recognition of Investment Income						
F1. Current Year: 0.20 x E3	585,388	1,374,210				
F2. First Prior Year	(8,382,515)	585,388	\$ 1,374,210			
F3. Second Prior Year	7,887,921	(8,382,515)	585,388	\$ 1,374,210		
F4. Third Prior Year	(1,628,799)	7,887,921	(8,382,513)	585,386	\$1,374,210	
F5. Fourth Prior Year	N/A	N/A	N/A	N/A	N/A	\$1,374,209
F6. Total Recognized Investment Gain (Loss)	(1,538,005)	1,465,004	(6,422,915)	1,959,596	1,374,210	1,374,209
G. Funding Value End of Year: A+D+E2+F6	161,814,117	163,598,030				
H. Difference Between Market & Funding Value	(7,120,945)	(1,714,900)	4,708,015	2,748,419	1,374,209	0
I. Recognized Rate of Return	6.3%	8.2%				
J. Market Value Rate of Return	9.4%	12.2%				

The Funding Value of Assets recognizes assumed investment income (line E2) fully each year. Differences between actual and assumed investment income (line E3) are phased-in over a closed four-year period. During periods when investment performance exceeds the assumed rate, Funding Value of Assets will tend to be less than market value. During periods when investment performance is less than the assumed rate, Funding Value of Assets will tend to be greater than market value. The Funding Value of Assets is **unbiased** with respect to Market Value. At any time, it may be either greater or less than Market Value. If actual and assumed rates of investment income are exactly equal for four consecutive years, the Funding Value will become equal to Market Value.

## Development of Funding Value of Retirement System Assets

<b>Year Ended June 30:</b>	<b>General</b>	<b>Police/Fire</b>	<b>Total</b>
A. Funding Value Beginning of Year	\$79,550,006	\$82,264,111	\$161,814,117
B. Market Value End of Year	78,190,814	83,692,316	161,883,130
C. Market Value Beginning of Year	75,985,044	78,708,128	154,693,172
D. Non-Investment Net Cash Flow	(6,659,439)	(4,353,940)	(11,013,379)
E. Investment Return			
E1. Market Total: B - C - D	8,865,209	9,338,128	18,203,337
E2. Amt. for Immediate Recognition	5,525,971	5,806,317	11,332,288
E3. Amt. for Phased-In Recognition: E1 - E2	3,339,238	3,531,811	6,871,049
F. Phased-in Recognition of Investment Return			
F1. Current Year: (.20 x E3)	667,848	706,362	1,374,210
F2. First Prior Year	288,239	297,149	585,388
F3. Second Prior Year	(4,182,167)	(4,200,348)	(8,382,515)
F4. Third Prior Year	3,950,724	3,937,197	7,887,921
F5. Fourth Prior Year	N/A	N/A	N/A
F6. Total Recognized Investment Gain (Loss)	724,644	740,360	1,465,004
G. Funding Value End of Year: A+D+E2+F6	79,141,182	84,456,848	163,598,030

## Comments and Conclusion

**Comment 1:** The recommended contribution for all groups increased from the prior year due to changes in assumptions and benefit provisions, in addition to slight pay losses for General employees and more significant pay losses for Police/Fire employees and Police Service Aides. This increase was partially offset by the asset gains described in Comment 3.

The change in benefit provisions recognized in this valuation are as follows:

- The benefit multiplier for Executive Department Heads who retire after June 1, 2023 was increased from 2.0% after 20 years of service to 2.2% after 20 years of service.

The impact of this change in benefits served to increase liabilities by approximately \$34,000.

The changes in assumptions recognized in this valuation are as follows:

- The mortality assumption was updated;
- Rates of retirement were increased for the Police and Fire groups and Police Service Aides and decreased for the General groups;
- The base wage inflation rate was increased from 3.00% to 3.25%;
- The load in Final Average Compensation for unused sick and vacation time was increased from 10% to 13% for the Police and Fire groups; and
- The load associated with the annuity withdrawal option was increased from 5% to 7% for all groups.

The impact of these changes in assumptions served to increase liabilities by approximately \$8,869,000.

**Comment 2:** In addition to the assumption changes noted above, the following changes were also adopted pursuant to the Experience Study report dated October 24, 2023:

- Once the amortization period of the Police and Fire division reaches 15 years and the General division reaches 10 years, layered amortization will be implemented. Under the approach, the initial Unfunded Actuarial Accrued Liability (UAAL) will wind down until it is fully amortized; for each subsequent valuation, any new UAAL created by gains/losses, assumption changes, and/or plan changes for that valuation will be amortized over a new, closed 15-year period (10 years for General); and
- The asset smoothing period was increased from 4 years to 5 years.

These changes will have no impact on System liabilities. Instead, they will aid in stabilizing future contributions.

**Comment 3:** Investment return of 12.2% was higher than the assumed 7.25% on a market value basis. However, under the asset valuation method, investment gains and losses are spread over a five-year period. Partial recognition of this year's gain was combined with the continued phase-in of investment gains and losses from prior years resulting in a net recognized asset gain of 8.2% on a funding value of assets basis. The Funding Value exceeds the Market Value of Assets by approximately \$1.7 million (see page A-5), which is the net amount of unrecognized prior year gains/losses to be recognized over the coming four years.

## Comments and Conclusion

**Recommendation:** The actuarial present value of benefits payable to retirees and beneficiaries on the rolls as of June 30, 2024 exceeded the Reserve for Retired Benefit Payments. In accordance with the Retirement System Ordinance, we recommend the following transfers be made. In accordance with the current administrative procedures, since the reserve for Undistributed Investment Income is less than 10% of the Market Value of the fund, no transfer should be made from the reserve for Undistributed Investment Income to the Reserve for Employer Contributions.

Reserve Account	Recommended Transfer
Employer Contributions - General	\$(6,425,014)
Retired Benefit Payments - General	\$6,425,014
Employer Contributions - Police/Fire	\$(5,099,789)
Retired Benefit Payments - Police/Fire	\$5,099,789
Undistributed Investment Income	N/A

**Looking Ahead:** Due to the asset smoothing method, only a portion of the current year's asset gain was recognized and portions of prior years' gains and losses remain to be recognized. If the Market Value of Assets were used (instead of smoothed value), the employer contribution would have been approximately \$11,831,199 (instead of \$11,673,441) and the funded status would have been about 58.2% (instead of 58.8%). In addition, the liability for retired members and beneficiaries currently receiving benefits is roughly 75% funded on both a funding value of assets basis and a market value of assets basis. It is most important that the System receives contributions at least equal to the amounts shown in this report.

**Public Act 202:** Under Public Act 202 (PA 202) of the State of Michigan, Michigan municipalities are required to report liabilities under new uniform assumption guidelines. The current guidelines are currently only for reporting purposes (and not funding).

The uniform assumptions include the following:

- Investment return no higher than 6.90%;
- Assumed wage inflation no lower than 3.25% or based on an experience study within the last five years;
- Mortality assumption that uses a version of Pub-2010 with generational mortality improvement using scale MP-2021 or based on an experience study within the last five years; and
- Amortization period no longer than 15 years for Pension Plans.

In addition, PA 202 requires that, at least every 8 years, the local unit of government must either have a peer actuarial audit conducted by an actuary that is not the plan actuary or replace the plan actuary.

The information needed to satisfy PA 202 reporting requirements was supplied in the GASB report.

## Comments and Conclusion

### OTHER OBSERVATIONS:

#### General Implications of Contribution Allocation Procedure or Funding Policy on Future Expected Plan Contributions and Funded Status

Given the plan's contribution allocation procedure, if all actuarial assumptions are met (including the assumption of the plan earning 7.25% on the actuarial value of assets), it is expected that:

- 1) The employer normal cost as a percentage of pay is expected to remain level as a percentage of payroll.
- 2) The unfunded liability is expected to be paid off in approximately 19 years, which is the number of years remaining in the closed amortization schedule of the unfunded liability for the Police and Fire group.
- 3) The funded status of the plan is expected to reach a 100% funded ratio in approximately 19 years, which is the number of years remaining in the closed amortization schedule of the unfunded liability for the Police and Fire group.

#### Limitations of Funded Status Measurements

Unless otherwise indicated, a funded status measurement presented in this report is based upon the actuarial accrued liability and the actuarial value of assets. Unless otherwise indicated, with regards to any funded status measurements presented in this report:

- 1) The measurement is inappropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligations.
- 2) The measurement is inappropriate for assessing the need for or the amount of future employer contributions.
- 3) The measurement would produce a different result if the market value of assets were used instead of the actuarial value of assets, unless the market value of assets is used in the measurement.

The funding level of the plan on a Funding Value Basis is shown on page A-3.

\* After changes in benefit provisions and/or actuarial assumptions and actuarial cost methods.

^ Reflects Bond Issuance of \$21.4 million subsequent to measurement date of June 30, 2016.

**The Ratio of Present Assets to AAL** is a traditional measure of a system's funding progress. Except in years when the system is amended or actuarial assumptions are revised, this ratio can be expected to increase (or decrease) gradually toward 100%.

**The Ratio of UAAL to Valuation Payroll** is another relative index of condition. Unfunded actuarial accrued liabilities represent debt, while active member payroll represents the system's capacity to collect contributions to pay toward debt. The lower the ratio, the greater the financial strength – and vice versa.

### **SUMMARY OF BENEFIT PROVISIONS AND VALUATION DATA**

# Summary of Benefit Provisions Evaluated

## June 30, 2024

### Regular Retirement (no reduction factor for age):

The benefit amounts attributable to regular retirements and the conditions under which such benefits may be paid are described in tabular form on page B-4.

### Deferred Retirement (vested benefit):

#### *Eligibility:*

TPOAM, Executive Department Heads, Department Heads and Deputies, Professional and Technical, 44<sup>th</sup> District Court, SEIU AFL-CIO Local 517M, Supervisors: 5 years of service. Police Officers, Police Command, Detectives, Fire Fighters, Police Service Aides: 10 years of service.

#### *Annual Amount:*

Same as regular retirement but based upon service and final average compensation at time of termination.

TPOAM, Executive Department Heads, Department Heads and Deputies, Professional & Technical, 44<sup>th</sup> District Court, Police Service Aides: Payable at age 55 with 25 years of service or age 60 with 5 years of service.

Supervisors, SEIU AFL-CIO Local 517M: Payable at age 50 with 30 years of service or age 60 with 5 years of service.

Police Officers, Police Command, Detectives, Fire Fighters: Payable at age 55 with 10 years of service.

### Duty Death Before Retirement:

*Eligibility* - No age or service requirements.

*Annual Amount* - Computed as regular retirement but with additional service credit from date of death until date age 60 would have been attained. Spouse is paid 75% of regular retirement benefit; 1 or 2 unmarried children under age 19 are paid 10% of regular retirement benefit per child; 3 or more unmarried children under age 19 are paid an equal share of 25% of regular retirement benefit. Worker's Compensation payments are offset.

### Non-Duty Death Before Retirement:

*Eligibility* - 3 years of service.

*Annual Amount* - Same as duty death before retirement.

# Summary of Benefit Provisions Evaluated

June 30, 2024

## Duty Disability Retirement:

**Eligibility** - No age or service requirements.

### **Annual Amount:**

TPOAM: 66-2/3% of base monthly salary at time of disability, with recomputation to 70% after 5 years of disability and 75% after 10 years. Benefit is payable until attaining minimum retirement requirements.

Executive Department Heads, Department Heads & Deputies: 66% of base monthly salary at time of disability. Benefit is payable until voluntary retirement age.

Professional & Technical, 44<sup>th</sup> District Court, Supervisors, and SEIU AFL-CIO Local 517M: 66-2/3% of base monthly salary at time of disability. Benefit is payable until voluntary retirement age for Professional & Technical and Supervisors until age 60 for and SEIU AFL-CIO Local 517M.

Police Officers, Police Command, Detectives, Police Service Aides: 66-2/3% of base monthly salary. Workers' compensation is offset. Benefit is payable until age 55 for Police Officers, Police Command, and Detectives and until age 60 for Police Service Aides.

Fire Fighters: 66-2/3% of base monthly salary at time of disability. Worker's compensation is offset. Benefit is payable until voluntary retirement age.

### **Duty Disability Maximum Monthly Benefit:**

Executive Department Heads, Department Heads & Deputies:	\$5,000
Professional & Technical, 44 <sup>th</sup> District Court:	\$3,500
TPOAM, SEIU AFL-CIO Local 517M, Supervisors, Police Officers, Police Command, Detectives, Police Service Aides, Fire Fighters:	No maximum

## Non-Duty Disability Retirement:

### **Eligibility:**

SEIU AFL-CIO Local 517M: 10 years of service.

TPOAM, Executive Department Heads, Department Heads and Deputies, Professional and Technical, 44<sup>th</sup> District Court, Supervisors, Police Officers, Police Command, Detectives, Police Service Aides, Fire Fighters: 5 years of service.

# **Summary of Benefit Provisions Evaluated**

**June 30, 2024**

## ***Annual Amount:***

TPOAM: 66-2/3% of base monthly salary at time of disability. Benefit is payable until attaining minimum retirement requirements.

Fire Fighters: 50% of base monthly salary at time of disability. Benefits are payable the same as duty disability.

Executive Department Heads, Department Heads and Deputies, Professional and Technical, Local 270M, Supervisors, Police Officers, Police Command, Police Service Aides, Detectives: Benefits are the same as duty disability.

## **Automatic Death Benefit After Retirement:**

75% of a retiree's straight life pension will be continued to an eligible surviving spouse upon retiree's death with no corresponding reduction in straight life pension.

## **Lump Sum Death Benefit After Retirement:**

\$4,000 for all divisions.

## **Annuity Withdrawal:**

Members may withdraw their accumulated member contributions upon retirement with a corresponding reduction in pension amount.

## **Covered Compensation:**

TPOAM, Executive Department Heads, Department Heads and Deputies, Professional and Technical, Local 270M, Supervisors: Covered compensation includes base salary, longevity and up to 96 hours of sick leave incentive pay.

Police Command: Covered compensation includes base salary, longevity, payment in lieu of holidays, sick and personal business (120 hours) and vacation (200 hours).

Fire Fighters: Covered compensation includes base salary, longevity, payment in lieu of holidays, uniform allowance, cleaning allowance, food allowance, sick pay, paramedic premium, personal business (24 hours) and vacation.

Police Officers, Police Service Aides, and Detectives: Covered compensation includes base salary, longevity, payment in lieu of holidays, 120 hours of sick and personal business days, and up to 200 hours from the vacation bank.

\* For Police Officers hired after 5/30/2012, a member must have at least 25 years of actual service to be eligible to retire and receive a pension.  
This is actual service and does not include the purchase of service time.

\*\* For Fire Fighters hired after 9/30/2009, service for eligibility must be actual service and does not include the purchase of service time.

\*\*\* Service time previously purchased will be computed utilizing the multiplier in effect at the time of purchase.

^ 1% multiplier after 75% up to 80%.

### **SUMMARY OF VALUATION METHODS AND ASSUMPTIONS**

## Basic Financial Objective and Operation of the Retirement System

**Benefit Promises Made Which Must Be Paid For:** A retirement program is an orderly means of handing out, keeping track of, and financing contingent pension promises to a group of employees. As each member of the retirement program acquires a unit of service credit they are, in effect, handed an "IOU" which reads: "The Retirement System promises to pay you one unit of retirement benefits, payments in cash commencing when you retire."

The principal related financial question is: When shall the money required to cover the "IOU" be contributed? This year, when the benefit of the member's service is received? Or, some future year when the "IOU" becomes a cash demand?

The Constitution of the State of Michigan is directed to the question:

"Financial benefits arising on account of service rendered in each fiscal year shall be funded during that year and such funding shall not be used for financing unfunded accrued liabilities."

This Retirement System meets this constitutional requirement by having the following **Financial Objective: To establish and receive contributions, expressed as percents of active member payroll, which will remain approximately level from year to year** and will not have to be increased for future generations of taxpayers.

Translated into actuarial terminology, a level percent-of-payroll contribution objective means that the contribution rate must be at least:

*Normal Cost* (the current value of benefits likely to be paid on account of member's service being rendered in the current year).

... plus ...

*Interest on the Unfunded Actuarial Accrued Liability* (the difference between the actuarial accrued liability and current system assets).

If contributions to the retirement program are less than the preceding amount, the difference, plus investment earnings not realized thereon, will have to be contributed at some later time, or, benefits will have to be reduced, to satisfy the fundamental fiscal equation under which all retirement programs must operate; that is:

$$B = C + I - E$$

**Benefit** payments to any group of members and their beneficiaries cannot exceed the sum of:

**Contributions** received on behalf of the group.

... plus ...

**Investment** earnings on contributions received.

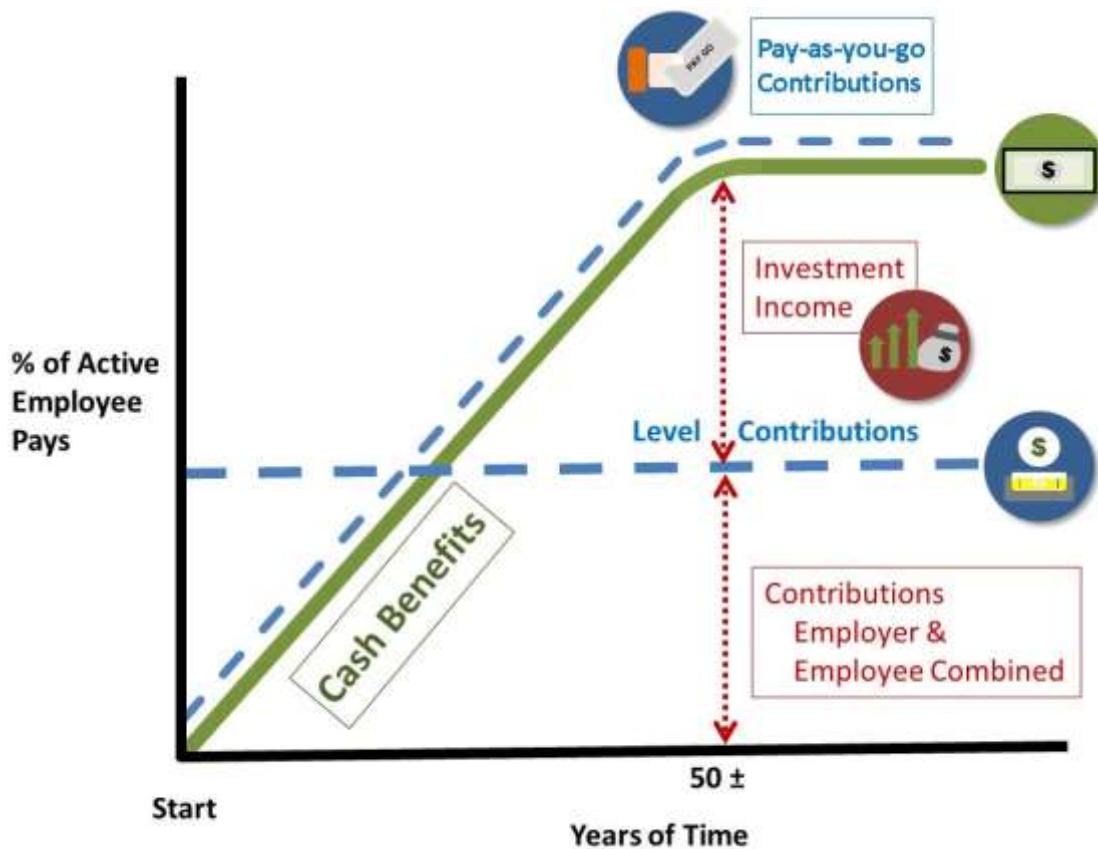

... minus ...

**Expenses** incurred in operating the program.

A by-product of the level percent-of-payroll contribution objective is the accumulation of invested assets for varying periods of time. Invested assets are a by-product of level percent-of-payroll contributions, not the objective. Investment income becomes a major contributor to the retirement program, and the amount is directly related to the amount of contributions and investment performance.

There are retirement programs designed to defer the bulk of contributions far into the future. Lured by artificially low present contributions, such programs ignore the inevitable consequence of a relentlessly increasing contribution rate – to a level greatly in excess of the level percent-of-payroll rate. ***This method of financing is prohibited in Michigan by the State Constitution.***

***Computed Contribution Rate Needed to Finance Benefits:*** From a given schedule of benefits and from the data furnished, the actuary calculates the contribution rate by means of an actuarial valuation – the technique of assigning monetary values to the risks assumed in operating a retirement program.

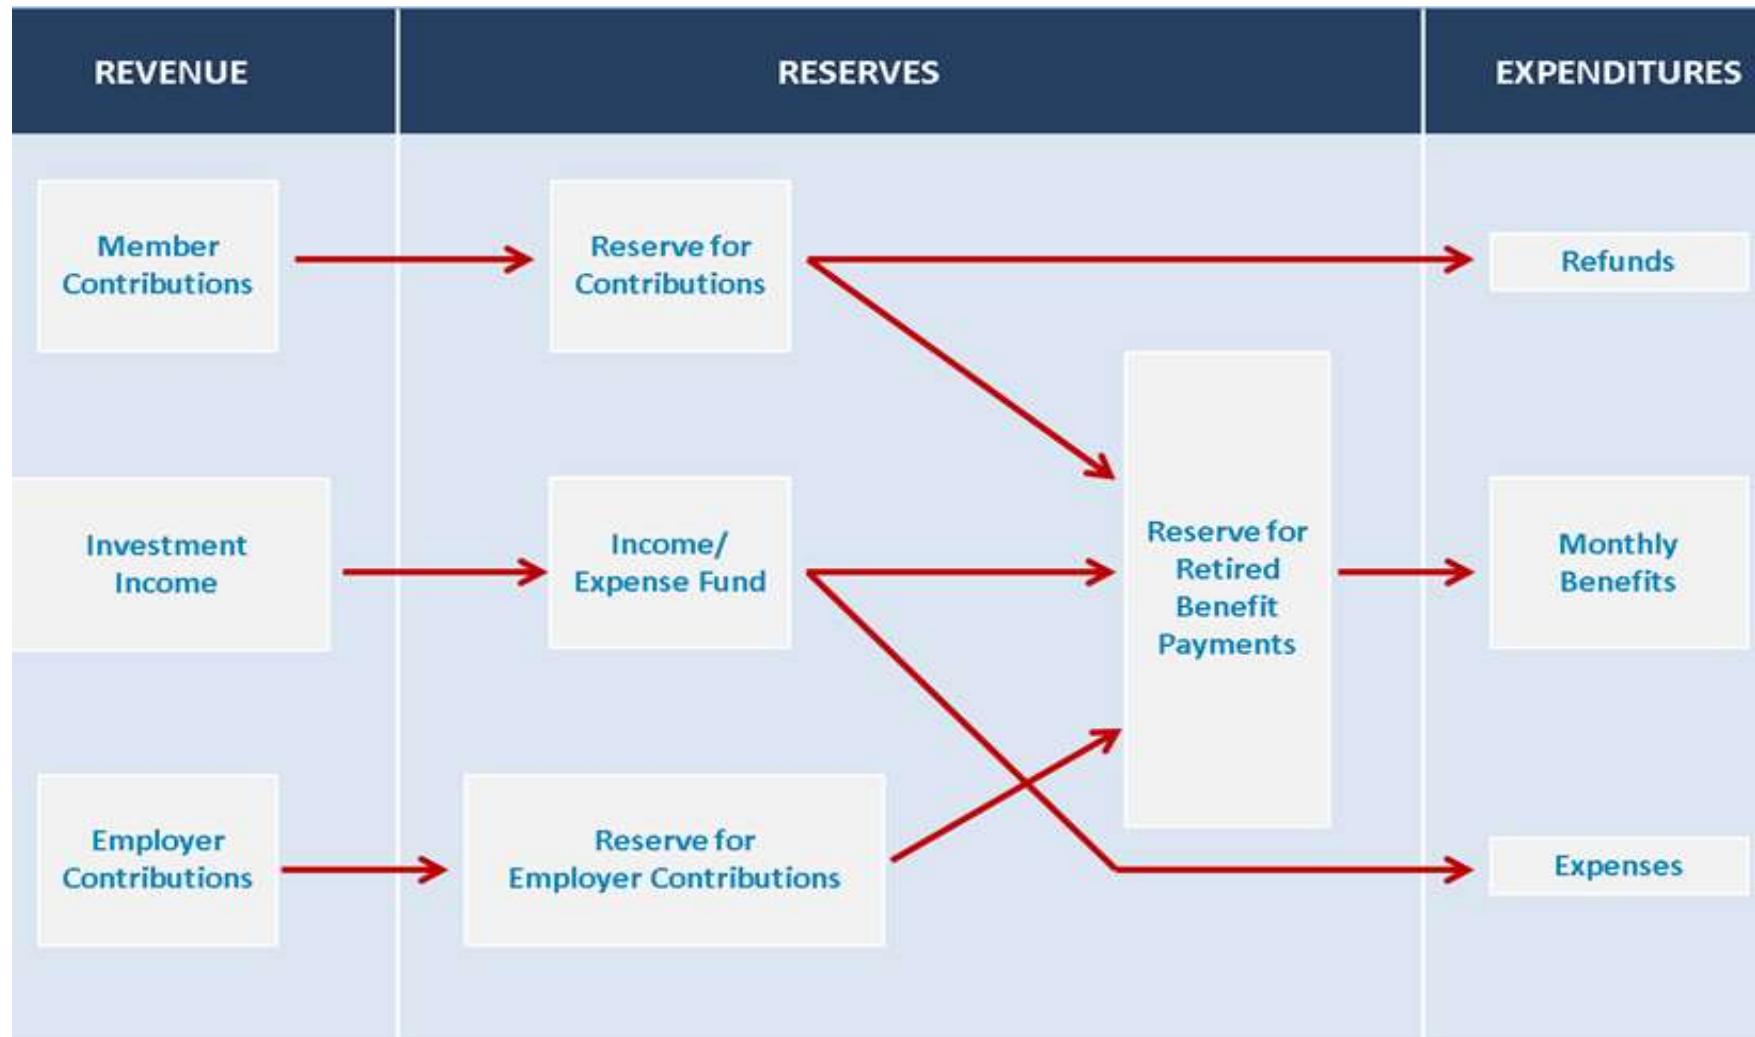

**CASH BENEFITS LINE.** This relentlessly increasing line is the fundamental reality of retirement plan financing. It happens each time a new benefit is added for future retirements (and happens regardless of the design for contributing for benefits).

**LEVEL CONTRIBUTION LINE.** Determining the level contribution line requires detailed assumptions concerning a variety of experiences in future decades, including:

- **Economic Risk Areas**
  - Rates of investment return
  - Rates of pay increase
  - Changes in active member group size
- **Non-Economic Risk Areas**
  - Ages at actual retirement
  - Rates of mortality
  - Rates of withdrawal of active members (turnover)
  - Rates of disability

## Flow of Money Through the Retirement System

## Valuation Methods

Normal cost and the allocation of benefit values between service rendered before and after the valuation date was determined using an individual **entry-age normal cost** valuation method having the following characteristics:

- The annual normal costs for each individual active member, payable from the date of employment to the date of retirement, are sufficient to accumulate the value of the member's benefit at the time of retirement; and
- Each annual normal cost is a constant percentage of the member's year-by-year projected covered pay.

***Financing of Unfunded Actuarial Accrued Liabilities:*** Unfunded actuarial accrued liabilities (UAAL) were amortized by level (principal & interest combined) percent-of-payroll contributions over a period of 19 years for the Police and Fire plans and as a level dollar amount over a period of 14 years for the General and Water plans.

Once the amortization period for the Police and Fire plans reaches 15 years and the amortization period for the General plans reaches 10 years, layered amortization will be implemented. Under this approach, the initial UAAL will wind down until it is fully amortized. In subsequent valuations, any new UAAL created by gains/losses, assumption changes, and/or plan changes for that valuation will be amortized over new, closed 15-year periods for Police and Fire and 10-year periods for General.

## Actuarial Assumptions Used in the Valuation

The actuarial assumptions used for this report were based upon the results of an experience study for the City of Royal Oak Retirement System covering the period July 1, 2017 through June 30, 2022. A report dated October 24, 2023 presented the results of this experience study. Unless otherwise noted, the assumptions were first used with the actuarial valuation date of June 30, 2024. The actuarial assumptions represent estimates of future experience.

The actuary calculates the contribution requirements and benefit values of the plan by applying actuarial assumptions to the benefit provisions and census data furnished, using the valuation methods described on page C-5.

The principal areas of financial risk which require assumptions about future experience are:

- Long-term rates of investment income;
- Patterns of salary increases;
- Rates of mortality before and after retirement;
- Rates of withdrawal from active membership;
- Rates of disability among members and their subsequent rates of recovery; and
- Probabilities of retirement at various ages after benefit eligibility.

In a valuation the monetary effect of each assumption, for each distinct experience group, is projected for the next year and for each year over the next half-century or longer.

Actual experience will not coincide exactly with assumed experience, regardless of the skill of the actuary, the completeness of the data and the precision of the many calculations that are made. Each valuation provides a complete recalculation of system obligations based upon assumptions regarding future experience and takes in to account all past differences between assumed and actual experience. The result is a continual series of small adjustments of the computed contribution rate.

From time to time, it is appropriate to modify one or more of the assumptions to reflect basic experience trends (but not random year-to-year fluctuations).

**The rates of salary increase** used for individual members are in accordance with the following table. This assumption is used to project a member's current salary to the salaries upon which benefit amounts will be based.

Sample Ages	Annual Rate of Salary Increase for Sample Ages		
	Base (Economic)	Merit & Longevity	
		General, Water & Police Service Aides	Police-Fire
20	3.25%	2.16%	1.69%
25	3.25%	1.76%	1.69%
30	3.25%	1.51%	1.69%
35	3.25%	1.34%	1.18%
40	3.25%	1.20%	0.44%
45	3.25%	0.94%	0.14%
50	3.25%	0.64%	0.08%
55	3.25%	0.37%	0.02%
60	3.25%	0.09%	0.00%
65	3.25%	-	-
Ref		760	761

**The rate of investment return** was 7.25% per year, compounded annually, net after administrative and investment expenses. This assumption is used to make money payable at one point in time equal in value to a different amount of money payable at another point in time.

The assumed real return for funding purposes is the net rate of return in excess of average salary increases. Considering other assumptions used in the valuation, the 7.25% translates to a real return of approximately 4.00%.

	Year Ending June 30					5-Year Average
	2024	2023	2022	2021	2020	
(1) Nominal rate*	8.2 %	6.3 %	5.5 %	10.9 %	6.6 %	7.5 %
(2) Increase in CPI	3.0 %	3.0 %	9.1 %	5.4 %	0.6 %	4.2 %
(3) Average salary increase	12.1 %	8.1 %	3.5 %	2.3 %	1.9 %	5.5 %
(4) Real return						
- investment purposes						3.3 %
- funding purposes						2.0 %

\* The nominal rate of return was computed using the approximate formula:  $i = I \text{ divided by } 1/2 (A+B-I)$ , where  $I$  is recognized investment income,  $A$  is the beginning of year funding value and  $B$  is the end of year funding value.

*The mortality tables used are as follows:*

**General**

- **Healthy Pre-Retirement:** Pub-2010 General Employee Mortality Tables, amount-weighted, and projected with mortality improvements using the fully generational MP-2021 projection scale from a base year of 2010.
- **Healthy Post-Retirement:** Pub-2010 General Healthy Retiree Mortality Tables, amount-weighted, and projected with mortality improvements using the fully generational MP-2021 projection scale from a base year of 2010.
- **Disability Retirement:** Pub-2010 Non-Safety Disabled Retiree Mortality Tables, amount-weighted, and projected with mortality improvements using the fully generational MP-2021 projection scale from a base year of 2010.

**Police and Fire**

- **Healthy Pre-Retirement:** Pub-2010 Safety Employee Mortality Tables, amount-weighted, and projected with mortality improvements using the fully generational MP-2021 projection scale from a base year of 2010.

Ref.	625	3412	3411	3411		3411

A member was assumed to be eligible for retirement after satisfying the following requirements:

<b>Group</b>	<b>Eligibility Requirements for Retirement</b>
SEIU AFL-CIO Local 517M and Foremen & Supervisors	30 years of service regardless of age (age 50 required for Foremen & Supervisors); or 50 years of age with 25 years of service; or 55 years of age with 20 years of service; or 60 years of age with 5 years of service.
Other General & Water	50 years of age with 25 years of service; or 55 years of age with 20 years of service; or 60 years of age with 5 years of service.
All Police, Fire Hired Before 10/1/2009 and Police & Fire Department Heads	25 years of service regardless of age; or 55 years of age with 10 or more years of service.
Fire Hired After 9/30/2009	50 years of age with 25 years of service; or 55 years of age with 10 years of service.
Police Service Aides	50 years of age with 25 years of service; or 55 years of age with 20 years of service; or 60 years of age with 5 or more years of service.

**Rates of separation from active membership** were as shown below (rates do not apply to members eligible to retire and do not include separation on account of death or disability). This assumption measures the probabilities of members terminating employment before eligibility for an immediate benefit.

Sample Ages	Years of Service	% of Active Members Separating Within Next Year	
		General & Police Service Aides	Police & Fire
ALL	0	12.00%	10.00%
	1	9.00%	7.00%
	2	7.00%	5.00%
	3	5.00%	4.00%
	4	4.50%	3.50%
25 30 35 40 45 50 55 60 65	5 & Over	4.50%	2.50%
	30	4.00%	2.00%
	35	3.50%	1.25%
	40	2.50%	0.75%
	45	2.00%	0.50%
	50	1.50%	0.25%
	55	1.00%	0.25%
	60	1.00%	0.25%
	65	1.00%	0.25%
Ref.		29	30
		1300	1177

**Rates of disability** were as follows. This assumption measures the probability of members retiring with a disability benefit.

Sample Ages	% of Active Members Becoming Disabled Within Next Year		
	General, Water & Police Service Aides		Police & Fire
	Male	Female	
20	0.04%	0.02%	0.08%
25	0.05%	0.03%	0.11%
30	0.05%	0.04%	0.19%
35	0.07%	0.07%	0.23%
40	0.11%	0.10%	0.53%
45	0.16%	0.14%	0.60%
50	0.26%	0.23%	0.71%
55	0.46%	0.38%	0.83%
60	0.77%	0.55%	0.90%
Ref.	33	34	45

**Loading Factor for Final Average Compensation:** In the valuation process, a person's salary is assumed to increase by a certain percentage each year (see page C-7). However, compensation for benefit purposes includes things such as sick leave incentive pay, which are not reported for the valuation. In order to more accurately calculate contribution requirements, the General active normal retirement liabilities were increased by 3.0% to account for the items not reported for valuation purposes, and Police/Fire active normal retirement liabilities were increased by 13.0%. As additional experience emerges, the ratios will be periodically adjusted to better estimate the effect of inclusion of additional items in final average compensation.

### **Final Average Compensation with and without Extra Compensation Items New General Retirees**

Year Ending June 30	Final Average Compensation		Ratio
	With Extras	Without Extras

## Miscellaneous and Technical Assumptions

June 30, 2024

<b>Marriage Assumption:</b>	90% of males and 90% of females are assumed to be married for purposes of death-in-service benefits. Male spouses are assumed to be three years older than female spouses.
<b>Pay Increase Timing:</b>	Beginning of (Fiscal) year. This is equivalent to assuming that reported pays represent amounts paid to members during the year ended on the valuation date.
<b>Pay Annualization:</b>	Reported pay for members with less than 12 contributing months was annualized by the ratio of 12 to the number of contribution months in the year.
<b>Decrement Timing:</b>	Decrements of all types are assumed to occur mid-year.
<b>Eligibility Testing:</b>	Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
<b>Decrement Relativity:</b>	Decrement rates are used directly from the experience study, without adjustment for multiple decrement table effects.
<b>Decrement Operation:</b>	All decrements the first 5 years of service. Only mortality operates during retirement eligibility.
<b>Service Credit Accruals:</b>	It is assumed that members accrue one year of service credit per year.
<b>Loads:</b>	Age and Service Retirement Present Values for General and PSA members were loaded by 3.0% and Police/Fire members were loaded by 13.0% to account for the additional amount included in the FAC due to unused sick time and unused vacation time. An additional loading factor of 7.0% was applied to each division for Annuity Withdrawal paid at retirement in lump sums.
<b>Incidence of Contributions:</b>	Contributions are assumed to be received continuously throughout the year based upon the computed percent-of-payroll shown in this report, and the actual payroll payable at the time contributions are made.
<b>Normal Form of Benefit:</b>	A 75% automatic joint and survivor payment is the assumed normal form of benefit for married people.
<b>Benefit Service:</b>	Exact fractional service is used to determine the amount of benefit payable.

## Glossary

**Accrued Service:** The service credited under the plan which was rendered before the date of the actuarial valuation.

**Actuarial Accrued Liability:** The difference between (i) the actuarial present value of future plan benefits, and (ii) the actuarial present value of future normal cost. Sometimes referred to as “accrued liability” or “past service liability.”

**Actuarial Assumptions:** Estimates of future plan experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement assumptions (rates of mortality, disability, turnover and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic assumptions (salary increases and investment income) consist of an underlying rate in an inflation-free environment plus a provision for a long-term average rate of inflation.

**Actuarial Cost Method:** A mathematical budgeting procedure for allocating the dollar amount of the “actuarial present value of future plan benefits” between the actuarial present value of future normal cost and the actuarial accrued liability. Sometimes referred to as the “actuarial funding method.”

**Actuarial Equivalent:** A single amount or series of amounts of equal value to another single amount or series of amounts, computed on the basis of the rate(s) of interest and mortality tables used by the plan.

**Actuarial Present Value:** The amount of funds presently required to provide a payment or series of payments in the future. It is determined by discounting the future payments at a predetermined rate of interest, taking into account the probability of payment.

**Amortization:** Paying off an interest-bearing liability by means of periodic payments of interest and principal, as opposed to paying it off with a lump sum payment.

**Experience Gain (Loss):** A measure of the difference between actual experience and that expected based upon a set of actuarial assumptions during the period between two actuarial valuation dates, in accordance with the actuarial cost method being used.

**Normal Cost:** The annual cost assigned, under the actuarial funding method, to current and subsequent plan years. Sometimes referred to as “current service cost.” Any payment toward the unfunded actuarial accrued liability is not part of the normal cost.

**Plan Termination Liability:** The actuarial present value of future plan benefits based on the assumption that there will be no further accruals for future service and salary. The termination liability will generally be less than the liabilities computed on a “going-concern” basis and is not normally determined in a routine actuarial valuation.

**Reserve Account:** An account used to indicate that funds have been set aside for a specific purpose and are not generally available for other uses.

## Glossary

**Unfunded Actuarial Accrued Liability:** The difference between the actuarial accrued liability and valuation assets. Sometimes referred to as “unfunded accrued liability.”

**Valuation Assets:** The value of current plan assets recognized for valuation purposes. Generally based on book value plus a portion of unrealized appreciation or depreciation.

## Meaning of “Unfunded Actuarial Accrued Liabilities”

“**Actuarial accrued liabilities**” are *the portion of the present value of plan promises to pay benefits in the future not covered by future normal cost contributions*. A liability has been established (“accrued”) because service has been rendered, but the resulting monthly cash benefit may not be payable until years in the future. Actuarial accrued liabilities are the results of complex mathematical calculations, which are made annually by the plan’s actuary.

If “actuarial accrued liabilities” at any time exceed the plan’s accrued assets, the difference is “**unfunded actuarial accrued liabilities**.” This is the common condition. If the plan’s assets equaled the plan’s “actuarial accrued liabilities,” the plan would be termed “fully-funded.” This is an unusual condition.

---

Each time a plan adds a new benefit which applies to service already rendered, an “actuarial accrued liability” is created, which is also an “unfunded actuarial accrued liability” because assets do not immediately increase to cover the value of the new benefit promises. Payment for such unfunded actuarial accrued liabilities is spread over a period of years, commonly in the 20-40-year range.

Unfunded actuarial accrued liabilities can occur in another way: if actual experience is less favorable than assumed experience, the difference is added to unfunded actuarial accrued liabilities. For example, in plans where benefits are directly related to pay near time of retirement, unfunded actuarial accrued liabilities increase when unexpected rates of pay increase create additional actuarial accrued liabilities which are not offset by higher than assumed investment income. Most unexpected pay increases are the direct result of inflation, which is a very destructive force affecting financial stability.

The existence of unfunded actuarial accrued liabilities is not a cause for concern, but the changes from year to year in the amount of unfunded actuarial accrued liabilities are important.

Nor are unfunded actuarial accrued liabilities a bill payable immediately. However, it is important that policy-makers prevent the amount from becoming unreasonably high and ***it is vital for a plan to have a sound method for making payments toward them*** so that they are controlled.

## Pensions in an Inflationary Environment

**Value of \$1,000/Month Retirement Benefit  
to an Individual Who Retires at Age 55  
in an Environment of 3.0% Inflation**

<b>Age</b>	<b>COLA Rate</b>	
	<b>2.5%</b>	<b>0%</b>
55	\$1,000	\$1,000
56	993	969
57	986	938
58	978	909
59	971	880
60	964	852
65	930	726
70	896	619
75	864	527
80	833	450
85	804	383

The life expectancy of a 55-year-old male retiree is to age 84. The life expectancy for a 55-year-old female retiree is to age 87. Half of the people will outlive their life expectancy. The effects of even moderate amounts of inflation can be significant for those who live to an advanced age.

## **SECTION D**

---

### **FINANCIAL REPORTING**

NOTE: GASB Statements No. 67 and No. 68 are effective for Governmental Retirement Plans for the fiscal year beginning after June 15, 2013 (GASB Statement No. 67) and the fiscal year beginning after June 15, 2014 (GASB Statement No. 68). These statements replace GASB Statements No. 25 and No. 27.

## Supplementary Information

The information presented in the required supplementary schedules was determined as part of the actuarial valuations at the dates indicated. Additional information as of the latest actuarial valuation follows:

Valuation date:	June 30, 2024
Actuarial cost method:	Entry-Age
Amortization method:	Level percent for Police and Fire Level dollar for General and Water
Remaining amortization period:	19 years closed for Police and Fire 14 years closed for General and Water
Asset valuation method:	5-year smoothed market
Actuarial assumption:	
Investment rate of return	7.25%
Projected salary increases	3.25% - 5.41%
Includes inflation at	2.50%
Cost-of-living adjustments	None

Membership of the plan consisted of the following at June 30, 2024, the date of the latest actuarial valuation.

Retirees and beneficiaries receiving benefits	540
Terminated plan members entitled to but not yet receiving benefits	17
Active plan members	<u>185</u>
Total	742

This information is presented in draft form for review by the City's auditor. Please let us know if there are any changes so that we may maintain consistency with the City's financial statements.

# Schedule of Funding Progress and Risk Metrics

## Schedule of Funding Progress

Actuarial Valuation Date	Actuarial Value of Assets	Actuarial Accrued Liability (AAL) Entry-Age	Unfunded AAL (UAAL)	Funded Ratio	Covered Payroll	UAAL as a % of Covered Payroll
6-30-15	\$133,358,876	\$ 208,799,571	\$ 75,440,695	63.9 %	\$15,312,473	492.7%

7-1-25	11,673,441	

## APPENDIX

---

### RISK MEASURES

## Risk Commentary

The determination of the accrued liability and the actuarially determined contribution requires the use of assumptions regarding future economic and demographic experience. Risk measures, as illustrated in this report, are intended to aid in the understanding of the effects of future experience differing from the assumptions used in the course of the actuarial valuation. Risk measures may also help with illustrating the potential volatility in the accrued liability and the actuarially determined contribution that result from the differences between actual experience and the actuarial assumptions.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions due to changing conditions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period, or additional cost or contribution requirements based on the Plan's funded status); and changes in plan provisions or applicable law. The scope of an actuarial valuation does not include an analysis of the potential range of such future measurements.

Examples of risk that may reasonably be anticipated to significantly affect the plan's future financial condition include:

- **Investment Risk** – actual investment returns may differ from the expected returns;
- **Asset/Liability Mismatch** – changes in asset values may not match changes in liabilities, thereby altering the gap between the accrued liability and assets and consequently altering the funded status and contribution requirements;
- **Contribution Risk** – actual contributions may differ from expected future contributions. For example, actual contributions may not be made in accordance with the plan's funding policy or material changes may occur in the anticipated number of covered employees, covered payroll, or other relevant contribution base;
- **Salary and Payroll Risk** – actual salaries and total payroll may differ from expected, resulting in actual future accrued liability and contributions differing from expected;
- **Longevity Risk** – members may live longer or shorter than expected and receive pensions for a period of time other than assumed; and
- **Other Demographic Risks** – members may terminate, retire or become disabled at times or with benefits other than assumed resulting in actual future accrued liability and contributions differing from expected.

The effects of certain trends in experience can generally be anticipated. For example, if the investment return since the most recent actuarial valuation is less (or more) than the assumed rate, the cost of the plan can be expected to increase (or decrease). Likewise, if longevity is improving (or worsening), increases (or decreases) in cost can be anticipated.

The computed contribution amount shown on page A-2 may be considered as a minimum contribution rate that complies with the Board's funding policy. The timely receipt of the actuarially determined contributions is critical to support the financial health of the plan. Users of this report should be aware that contributions made at the actuarially determined amounts do not necessarily guarantee benefit security.

# Risk Commentary (Concluded)

## Plan Maturity Measures

Risks facing a pension plan evolve over time. A young plan with virtually no investments and paying few benefits may experience little investment risk. An older plan with a large number of members in pay status and a significant trust may be much more exposed to investment risk. Generally accepted plan maturity measures include the following:

	<u>2024</u>	<u>2023</u>	<u>2022</u>	<u>2021</u>	<u>2020</u>
Ratio of the market value of assets to payroll	9.19	9.85	9.96	12.08	10.06
Ratio of actuarial accrued liability to payroll	15.81	16.74	17.00	16.84	16.82
Ratio of actives to retirees and beneficiaries	0.34	0.34	0.36	0.37	0.37
Ratio of net cash flow to market value of assets	-6.8%	-6.9%	-5.7%	-5.5%	-5.8%

## Ratio of Market Value of Assets to Payroll

The relationship between assets and payroll is a useful indicator of the potential volatility of contributions. For example, if the market value of assets is 10.0 times the payroll, a return on assets 5% different than assumed would equal 50% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in plan sponsor contributions as a percentage of payroll.

## Ratio of Actuarial Accrued Liability to Payroll

The relationship between actuarial accrued liability and payroll is a useful indicator of the potential volatility of contributions for a fully funded plan. A funding policy that targets a funded ratio of 100% is expected to result in the ratio of assets to payroll and the ratio of liability to payroll converging over time. The ratio of liability to payroll may also be used as a measure of sensitivity of the liability itself. For example, if the actuarial accrued liability is 15.0 times the payroll, a change in liability 2% other than assumed would equal 30% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in liability (and also plan sponsor contributions) as a percentage of payroll.

## Ratio of Actives to Retirees and Beneficiaries

A young plan with many active members and few retirees will have a high ratio of actives to retirees. A mature open plan may have close to the same number of actives to retirees resulting in a ratio near 1.0. A super-mature or closed plan may have significantly more retirees than actives resulting in a ratio below 1.0.

## Ratio of Net Cash Flow to Market Value of Assets

A positive net cash flow means contributions exceed benefits and expenses. A negative cash flow means existing funds are being used to make payments. A certain amount of negative net cash flow is generally expected to occur when benefits are prefunded through a qualified trust. Large negative net cash flows as a percent of assets may indicate a super-mature plan or a need for additional contributions.

## Additional Risk Assessment

Additional risk assessment is outside the scope of the annual actuarial valuation. Additional assessment may include scenario tests, sensitivity tests, stochastic modeling, stress tests, and a comparison of the present value of accrued benefits at low-risk discount rates with the actuarial accrued liability.

# Low-Default-Risk Obligation Measure

## Introduction

In December 2021, the Actuarial Standards Board (ASB) adopted a revision to Actuarial Standard of Practice (ASOP) No. 4, *Measuring Pension Obligations and Determining Pension Plan Costs or Contributions*. The revised ASOP No. 4 requires the calculation and disclosure of a liability referred to by the ASOP as the “Low-Default-Risk Obligation Measure” (LDROM). The rationale that the ASB cited for the calculation and disclosure of the LDROM was included in the Transmittal Memorandum of ASOP No. 4 and is presented below (emphasis added):

“The ASB believes that the calculation and disclosure of this measure provides **appropriate, useful information for the intended user regarding the funded status of a pension plan**. The calculation and disclosure of this additional measure is **not intended to suggest that this is the ‘right’ liability measure** for a pension plan. However, the ASB does believe that **this additional disclosure provides a more complete assessment of a plan’s funded status and provides additional information regarding the security of benefits that members have earned as of the measurement date.**”

## Comparing the Accrued Liabilities and the LDROM

One of the fundamental financial objectives of the City of Royal Oak Retirement System is to finance each member’s retirement benefits over the period from the member’s date of hire until the member’s projected date of retirement (entry age actuarial cost method) as a level percentage of payroll. To fulfill this objective, the discount rate that is used to value the accrued liabilities of the City of Royal Oak Retirement System is set equal to the **expected return** on the System’s diversified portfolio of assets (referred to sometimes as the investment return assumption). For the City of Royal Oak Retirement System, the investment return assumption is 7.25%.

The LDROM is meant to approximately represent the lump sum cost to a plan to purchase low-default-risk fixed income securities whose resulting cash flows essentially replicate in timing and amount the benefits earned (or the costs accrued) as of the measurement date. The LDROM is very dependent upon market interest rates at the time of the LDROM measurement. The lower the market interest rates, the higher the LDROM, and vice versa. The LDROM results presented in this report are based on the entry age actuarial cost method and discount rates based upon the June 2024 Treasury Yield Curve Spot Rates (end of month). The 1-, 5-, 10-, and 30-year rates follow: 5.12%, 4.34%, 4.22%, and 4.45%. This measure may not be appropriate for assessing the need for or amount of future contributions. This measure may not be appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan’s benefit obligation.

**The difference between the two measures (Valuation and LDROM) is one illustration of the savings the sponsor anticipates by taking on risk in a diversified portfolio.**

Valuation Accrued Liabilities	LDROM
\$278,304,767	\$383,111,720
